

My CariSurg Study Plan

Shamika Glasgow

CariSurg Cohort 2026

Reflection

- ★ I completed all Week 0 deliverables and stayed consistent throughout the week.
- ★ I worked through both technical and writing-based tasks, often stepping outside my comfort zone.
- ★ The biggest challenges were adapting to Google Colab and GitHub, and getting to grips with data cleaning for the first time.
- ★ With every task I finished, my confidence grew — by the end of the week I was writing pseudocode for a real clinical triage algorithm.
- ★ Going into Week 1, I want a routine that is structured, realistic, and built around how I work best.

My Current Balance

- ★ Full-time university student: BSc Computer Science with Management
- ★ Part-time work commitments (~4 hours per week)
- ★ CariSurg programme study and weekly deliverables
- ★ Personal rest, wellbeing, and life outside of study
- ★ The goal is consistency, not perfection and not burnout.

My Weekly Study Goal

- ★ Target: 16–20 hours per week (3–4 hours per day)
- ★ Mornings are my peak energy time — I protect them for deep, focused work
- ★ Evenings are for lighter tasks and review only — no heavy lifting at the end of a long day
- ★ Steady daily effort over last-minute cramming, every time

My Weekly Structure

Weekdays

- ★ Night (5pm–8pm): Deep focused study: coding, problem-solving, assignments
- ★ Daytime: University lectures and commitments
- ★ Evening: Light review, notes, or reading, no heavy work.

Saturday

- ★ Morning: Extended deep study session (up to 4 hours)
- ★ Afternoon: Personal time, rest, and errands

- ★ Evening: Optional light reviews only

Sunday

- ★ Morning: Weekly review and planning for the week ahead
- ★ Afternoon: Light reading or catching up on anything outstanding
- ★ Evening: Full rest, reset for Monday.

□ My Strategy

- ★ Protect morning study blocks - that is when I think the clearest.
- ★ Open Colab or GitHub a little every day to build familiarity, not just before deadlines
- ★ Break data tasks into small steps rather than tackling everything at once
- ★ Keep a simple weekly checklist so nothing sneaks up at the last minute

💡 Why This Works

- ★ It builds tool confidence gradually rather than in stressful bursts before deadlines
- ★ It is honest about my life as a full-time student with other commitments
- ★ It leaves room for life without falling behind on the programme

*Week 0 showed me what I am capable of when I show up consistently.
The tools were unfamiliar and scary at times as well as, the content was new.
I did it anyway.*
